1.108.5 Notify users on system-related issues [1]

# Use and Manage Local System Documentation

## Objective

Candidates should be able to use and administer the `man` facility and the material in `/usr/share/doc/`.

This objective includes finding relevant `man` pages, searching `man` page sections, finding commands and `man` pages related to them, and configuring access to `man` sources and the `man` system. It also includes using system documentation stored in `/usr/share/doc/` and determining what documentation to keep in `/usr/share/doc/`.

`MANPATH` — an environment variable that specifies  
a search path for `man` pages

`man` — the program that accesses `man` pages

`apropos` — searches descriptions of `man` pages,  
returning all matches; same as `man -k`

`whatis` — returns descriptions of matching `man`  
page; same as `man -f`

# Using `whatis`

display manual page descriptions

- ▶ `whatis` searches the manual page names and displays the manual page descriptions of any name matched.
- ▶ `$ whatis nmap`  $\leftarrow$   
`nmap (1) - Network exploration tool  
and security scanner`
- ▶ (in Debian and Ubuntu but not Red Hat/Fedora)  
`-r, --regex` Interpret each name as  
a regular expression.  
`$ whatis -r ^ifc`  $\leftarrow$   
`ifconfig (8) - configure a network interface`
- ▶ Is equivalent to  
`$ man -f`  $\leftarrow$
- ▶ This may have been asked in previous exams
- ▶ Nick's silly mnemonic: What the `-f...` is...

# Using `apropos`

search the manual page names and descriptions

Each manual page has a short description available within it.  
`apropos` searches the descriptions for instances of keyword.

```
$ apropos nmap ↵
mmap (2)           - map or unmap files or devices into memory
munmap (2)         - map or unmap files or devices into memory
nmap (1)           - Network exploration tool and security scanner
Tk_MapWindow (3tk) - map or unmap a window
...
```

- ▶ Is equivalent to  
\$ **man -k** ↵
- ▶ This may have been asked in previous exams
- ▶ Nick's silly mnemonic: `apropos -kan` produce many lines of output

# Database for `what is` and `apropos`

```
man(1)
```

## NAME

man - format and display the on-line manual pages

manpath - determine user's search path for man pages

## SYNOPSIS

```
man [-acdfFhkKtwW] [--path] [-m system] [-p string]
[-C config_file] [-M pathlist] [-P pager] [-S section_list]
[section] name ...
```

## DESCRIPTION

man formats and displays the on-line manual pages.

- k** Equivalent to `apropos`
- f** Equivalent to `whatis`
- K** Search for the specified string in *all* `man` pages.  
Warning: this is probably very slow! It helps to specify a section. (Just to give a rough idea, on my machine this takes about a minute per 500 `man` pages.)
- a** Show all matching `man` pages from all sections; for example, `man -a passwd` shows the `man` pages both for `passwd(1)` and `passwd(5)`.

# Configuring how man finds manpages

- ▶ The configuration file for man is:
  - ▶ Red Hat/Fedora systems: `/etc/man.config`
  - ▶ Ubuntu: `/etc/manpath.config`
- ▶ can override the search paths specified in the configuration files using the `MANPATH` environment variable
  - ▶ `MANPATH` is a colon-separated list of directories to search
- ▶ You can see the existing search path with
  - \$ `man --path` ↵
  - or:
  - \$ `manpath` ↵
  - `/usr/local/man:/usr/local/share/man:/usr/share/man:/usr/X11R6/man`

1. *Executable programs* or shell commands
2. System calls (functions provided by the kernel)
3. Library calls (functions within system libraries)
4. Special files (usually found in `/dev`)
5. *File formats and conventions* eg `/etc/passwd`
6. Games
7. Miscellaneous (including macro packages and conventions), e.g. `man(7)`, `groff(7)`
8. *System administration commands* (usually only for root)
9. Kernel routines [Non standard]

# Navigating in `man` (really `less`)

The `man` program actually calls many other programs, displaying the result, by default, with the `less` program:

```
$ man -d man 2>&1 | tail -n 1 ↵
```

```
(cd /usr/share/man/en && (echo ".pl 11i"; /usr/bin/gunzip  
-c '/usr/share/man/en/man1/man.1.gz') | /usr/bin/gtbl |  
/usr/bin/nroff -c -legacy ISO-8859-1 -mandoc 2>/dev/null |  
/usr/bin/less -is)
```

**h** Show detailed help on using the `less` program

**q** Quit

**g** Go to beginning of `man` page

**G** Go to end of `man` page

**/string** Search for string.

**n** repeat previous search forwards

**?string** Search for string backwards

**N** repeat previous search backwards

**ESC-u** Undo (toggle) search highlighting.

Info: An Introduction

\*\*\*\*\*

The GNU Project distributes most of its on-line manuals in the "Info format", which you read using an "Info reader". You are probably using an Info reader to read this now.

There are two primary Info readers: 'info', a stand-alone program designed just to read Info files, and the 'info' package in GNU Emacs, a general-purpose editor. At present, only the Emacs reader supports using a mouse.

If you are new to the Info reader and want to learn how to use it, type the command 'h' now. It brings you to a programmed instruction sequence.

To read about expert-level Info commands, type 'n' twice. This brings you to 'Info for Experts', skipping over the 'Getting Started' chapter.

\* Menu:

```
* Getting Started::      Getting started using an Info reader.
* Expert Info::         Info commands for experts.
* Creating an Info File:: How to make your own Info file.
* Index::               An index of topics, commands, and variables.
-zz-Info: (info.info.gz)Top, 29 lines -Top-----
Welcome to Info version 4.8. Type ? for help, m for menu item.
```
