Use and Manage Local System Documentation
Objective

1.108.1
Use and manage local
system documentation
Weight 4

Geoffrey Robertson

Context

Objective

whatis and apropos

man

GNU info

/usr/share/doc

License Of This
Document

Candidates should be able to use and
administer the man facility and the material
in /usr/share/doc/.

This objective includes finding relevant man
pages, searching man page sections,
finding commands and man pages related
to them, and configuring access to man
sources and the man system.

It also includes using system
documentation stored in
/usr/share/doc/ and determining what
documentation to keep in
/usr/share/doc/.

Use and Manage Local System Documentation
Key files, terms, and utilities

MANPATH — an environment variable that specifies a search path for man pages

man — the program that accesses man pages

apropos — searches descriptions of man pages, returning all matches; same as man -k

whatis — returns descriptions of matching man page; same as man -f

Outline

Using `whatis`
display manual page descriptions

▶ `whatis` searches the manual page names and displays the manual page descriptions of any name matched.

▶ $ **whatis nmap** ↩
  nmap   (1) - Network exploration tool
               and security scanner

▶ (in Debian and Ubuntu but not Red Hat/Fedora)

  -r, --regex   Interpret each name as
                 a regular expression.
  $ **whatis -r ^ifc** ↩
  ifconfig (8) - configure a network interface

▶ Is equivalent to
  $ **man -f** ↩

▶ This may have been asked in previous exams

▶ Nick's silly mnemonic: What the **-f**... is...

Using `whatis`
display manual page descriptions

- ▶ `whatis` searches the manual page names and displays the manual page descriptions of any name matched.

- ▶ $ **whatis nmap** ↩
  ```
  nmap    (1)  - Network exploration tool
                 and security scanner
  ```

- ▶ (in Debian and Ubuntu but not Red Hat/Fedora)

  ```
  -r, --regex    Interpret each name as
                 a regular expression.
  ```
  $ **whatis -r ^ifc** ↩
  `ifconfig (8)  - configure a network interface`

- ▶ Is equivalent to
  $ **man -f** ↩

- ▶ This may have been asked in previous exams

- ▶ Nick's silly mnemonic: What the **-f** . . . is. . .

Using `whatis`
display manual page descriptions

- ▶ `whatis` searches the manual page names and displays the manual page descriptions of any name matched.
- ▶ $ **`whatis nmap`** ↩
  ```
  nmap    (1) - Network exploration tool
                  and security scanner
  ```
- ▶ (in Debian and Ubuntu but not Red Hat/Fedora)
  ```
  -r, --regex    Interpret each name as
                   a regular expression.
  ```
  $ **`whatis -r ^ifc`** ↩
  ```
  ifconfig (8)  - configure a network interface
  ```
- ▶ Is equivalent to
  $ **`man -f`** ↩
- ▶ This may have been asked in previous exams
- ▶ Nick's silly mnemonic: What the -f ... is...

Using whatis
display manual page descriptions

▶ whatis searches the manual page names and displays
  the manual page descriptions of any name matched.

▶ $ **whatis nmap** ↩
  ```
  nmap    (1)  - Network exploration tool
                 and security scanner
  ```

▶ (in Debian and Ubuntu but not Red Hat/Fedora)
  ```
  -r, --regex    Interpret each name as
                 a regular expression.
  ```
  $ **whatis -r ^ifc** ↩
  ```
  ifconfig (8)  - configure a network interface
  ```

▶ Is equivalent to
  $ **man -f** ↩

▶ This may have been asked in previous exams

▶ Nick's silly mnemonic: What the **-f...** is...

Outline

Using apropos
search the manual page names and descriptions

Each manual page has a short description available within it.
apropos searches the descriptions for instances of keyword.

```
$ apropos nmap ↩
mmap (2)          - map or unmap files or devices into memory
munmap (2)        - map or unmap files or devices into memory
nmap (1)          - Network exploration tool and security scanner
Tk_MapWindow (3tk) - map or unmap a window
...
```

- ▶ Is equivalent to
  - $ man -k ↩
- ▶ This may have been asked in previous exams
- ▶ Nick's silly mnemonic: apropos -kan produce many lines
  of output

Using apropos
search the manual page names and descriptions

Each manual page has a short description available within it.
apropos searches the descriptions for instances of keyword.

```
$ apropos nmap ↵
mmap (2)              - map or unmap files or devices into memory
munmap (2)           - map or unmap files or devices into memory
nmap (1)             - Network exploration tool and security scanner
Tk_MapWindow (3tk)   - map or unmap a window
...
```

- ► Is equivalent to
  - $ man -k ↵
- ► This may have been asked in previous exams
- ► Nick's silly mnemonic: apropos -kan produce many lines
  of output

Using `apropos`
search the manual page names and descriptions

Each manual page has a short description available within it.
`apropos` searches the descriptions for instances of keyword.

```
$ apropos nmap ←
mmap (2)              - map or unmap files or devices into memory
munmap (2)            - map or unmap files or devices into memory
nmap (1)              - Network exploration tool and security scanner
Tk_MapWindow (3tk)    - map or unmap a window
...
```

- ▶ Is equivalent to
  - $ `man -k` ←
- ▶ This may have been asked in previous exams
- ▶ Nick's silly mnemonic: apropos **-k**an produce many lines of output

NAME
       man - format and display the on-line manual pages
       manpath - determine user's search path for man pages

SYNOPSIS
       man [-acdfFhkKtwW]  [--path]  [-m system] [-p string]
       [-C config_file] [-M pathlist] [-P pager] [-S section_list]
       [section] name ...

DESCRIPTION
       man formats and displays the on-line manual pages.
```

Using man
options

- **−k** Equivalent to apropos
- **−f** Equivalent to whatis
- **−K** Search for the specified string in *all* man pages. Warning: this is probably very slow! It helps to specify a section. (Just to give a rough idea, on my machine this takes about a minute per 500 man pages.)
- **−a** Show all matching man pages from all sections; for example, man −a passwd shows the man pages both for passwd(1) and passwd(5).

Outline

Configuring how man finds manpages

- The configuration file for man is:
  - Red Hat/Fedora sytems: /etc/man.config
  - Ubuntu: /etc/manpath.config
- can override the search paths specified in the configuration files using the MANPATH environment variable
  - MANPATH is a colon-separated list of directories to search
- You can see the existing search path with
  $ **man --path** ↩
  or:
  $ **manpath** ↩
  /usr/local/man:/usr/local/share/man:/usr/share/man:/usr/X11R6/man

The Manual Section Numbers

1. *Executable programs* or shell commands
2. System calls (functions provided by the kernel)
3. Library calls (functions within system libraries)
4. Special files (usually found in /dev)
5. *File formats and conventions* eg /etc/passwd
6. Games
7. Miscellaneous (including macro packages and conventions), e.g. man(7), groff(7)
8. *System administration commands* (usually only for root)
9. Kernel routines [Non standard]

Navigating in `man` (really `less`)

The `man` program actually calls many other programs,
displaying the result, by default, with the `less` program:
```
$ man -d man 2>&1 | tail -n 1 ↵
(cd /usr/share/man/en && (echo ".pl 11i"; /usr/bin/gunzip
-c '/usr/share/man/en/man1/man.1.gz') | /usr/bin/gtbl |
/usr/bin/nroff -c -legacy ISO-8859-1 -mandoc 2>/dev/null |
/usr/bin/less -is)
```

   h Show detailed help on using the `less` program

   q Quit

   g Go to beginning of `man` page

   G Go to end of `man` page

   /string Search for string.

   n repeat previous search forwards

   ?string Search for string backwards

   N repeat previous search backwards

   ESC-u Undo (toggle) search highlighting.

GNU `info`

```
File: info.info,  Node: Top,  Next: Getting Started,  Up: (dir)

Info: An Introduction
*********************

The GNU Project distributes most of its on-line manuals in the "Info
format", which you read using an "Info reader".  You are probably using
an Info reader to read this now.

   There are two primary Info readers: 'info', a stand-alone program
designed just to read Info files, and the 'info' package in GNU Emacs,
a general-purpose editor.  At present, only the Emacs reader supports
using a mouse.

   If you are new to the Info reader and want to learn how to use it,
type the command 'h' now.  It brings you to a programmed instruction
sequence.

   To read about expert-level Info commands, type 'n' twice.  This
brings you to 'Info for Experts', skipping over the 'Getting Started'
chapter.

* Menu:

* Getting Started::      Getting started using an Info reader.
* Expert Info::          Info commands for experts.
* Creating an Info File:: How to make your own Info file.
* Index::                An index of topics, commands, and variables.
-zz-Info: (info.info.gz)Top, 29 lines -Top---------------------------
Welcome to Info version 4.8. Type ? for help, m for menu item.  ()()()
```

Outline

GNU `info` Navigation

Tab	Move among hyperlinks
Enter	Follow hyperlinks
d	Return to the top
?	List these info commands
n	Move to the "next" node of this node.
p	Move to the "previous" node of this node.
u	Move "up" from this node.
q	Quit Info altogether.
h	Show a primer for first time users.
/string	Search for string.
